-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 01 May 2001.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-15 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-15 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_\_.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Park et al (Park) USPAT 6,372,354 B1.

As to claim 1, Park discloses in Figure 1 an anti-static film for a display (materials embedded in hardcoat layer, col. 6, lines 19-23), comprising a hardcoat layer, 11, provided on the surface of a transparent substrate, 10, wherein said hard coat layer contains at least polymer (Applicant's resin) (col. 4, lines 6-11), Antimony Tin Oxide (Applicant's conductive material) (col. 4, lines 42-46), and silica (Applicant's low refractive index material) (col. 6, lines 10-23), surface electric resistance thereof is  $1.7 \times 10^6 \Omega/\square$  to  $2.3 \times 10^6 \Omega/\square$  (col. 7, lines 9-16) (less than Applicant's  $1.0 \times 10^{11} \Omega/\square$  or less), and the 5-degree specular reflectance (col. 7, lines 31-38) is 4.0% or less (Figure 2).

**FIG. 2**

Park does not explicitly disclose the exact range of surface electrical resistance and the exact range of Y value obtained by 5 degree specular reflectance. However, the ranges taught by Park, above, are within the respective claimed ranges. Therefore it would have been obvious to one of ordinary skill in the art of liquid crystal displays to use the claimed ranges for surface electrical resistance and 5 degree specular reflectance.

As to claim 2, Park discloses an anti-static film for a display, in accordance with claim 1.

Park does not explicitly disclose a film, wherein said low refractive index material has a particle size of 5 to 500 nm.

Art Unit: 2871

Park discloses a film, wherein said low refractive index material has a particle size that is sub-micron (because particle size must necessarily be less than or equal to the thickness of the applied sub-micron thick particle layer) (col. 4, lines 30-34) Park also discloses a conductive particle size of 120 to 145 nanometers (within Applicant's 5 to 500 nm), with the reason, suggestion, or motivation of producing suitable films without producing unwanted streaking or unwanted opaqueness (col. 4, lines 52-54).

Therefore it would have been obvious to one having ordinary skill in the art of liquid crystal displays to combine the use conductive and low refractive index material particles, sized within the claimed range of 5 to 500 nanometers, with the hardcoat layer of Park.

As to claim 3, Park discloses an anti-static film for a display, in accordance with claim 1, wherein said low refractive index material is contained at 1.4 wt. % to 2.3 wt. % (Applicant's 15 to 200 weight parts to 100 weight parts) of said conductive material (Table 1, col. 8, lines 20-28).

As to claim 4, Park discloses an anti-static film for a display, in accordance with claim 1, wherein said low refractive index material is silica sol (col. 6, lines 7-10).

As to claim 5, Park discloses an anti-static film for a display, in accordance with claim 2, wherein said low refractive index material is silica sol (col. 6, lines 7-10).

As to claim 6, Park discloses an anti-static film for a display, in accordance with claim 3, wherein said low refractive index material is silica sol (col. 6, lines 7-10).

As to claim 7, Park discloses an anti-static film for a display, in accordance with claim 1, wherein said conductive material is metal oxide particles (col. 4, lines 42-45).

As to claim 8, Park discloses an anti-static film for a display, in accordance with claim 2, wherein said conductive material is metal oxide particles (col. 4, lines 42-45).

As to claim 9, Park discloses an anti-static film for a display, in accordance with claim 3, wherein said conductive material is metal oxide particles (col. 4, lines 42-45).

As to claim 10, Park discloses an anti-static film for a display, in accordance with claim 4, wherein said conductive material is metal oxide particles (col. 4, lines 42-45).

2. Claims 11-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Park, as applied to claims 1, 2, 3, 4, and 7 above, in view of Hahn et al (Hahn) USPAT 4,422,721.

As to claims 11-15, Park discloses an anti-static film for a display, in accordance with claims 1, 2, 4, and 7. Park also discloses the use of adhesion-promoting coatings as prior art (col. 2, lines 34-46) to promote adhesion of the anti-reflection coating.

Park does not explicitly disclose a film, wherein at least two layers of said layers are colored, and said colors are made to be achromatic by mixing.

Hahn teaches the use of layers, wherein at least two layers of said layers are colored, to compensate for the indium tin oxide layer so as to maintain achromatic low reflectivity in the visible spectrum (Applicant's said colors are made to be achromatic by mixing) (col. 7, lines 22-37). Therefore, it would have been obvious to one having ordinary skill in the art of liquid crystals at the time the invention was made to modify the films of Park with the additional colored layer of Hahn to compensate for the color of the conductive material in order to maintain achromatic low reflectivity (col. 7, lines 22-37).

3. References cited but not applied are relevant to Applicant's claimed invention.

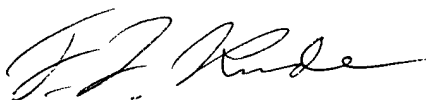

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy L Rude whose telephone number is (703) 305-0418. The examiner can normally be reached on Monday through Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William L Sikes can be reached on (703) 308-4842. The fax phone

Art Unit: 2871

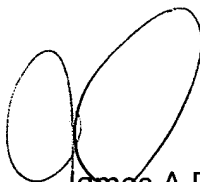

numbers for the organization where this application or proceeding is assigned are (703) 308-7724 for regular communications and (703) 308-7725 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-4900.
